

DermaPrep™ – a new paradigm and innovative device for wound and burn pre-treatment

DermaPrep™ combines a dual purpose treatment sponge – for a soft and gentle cleaning/cleansing and / or rough abrasion with a liquid control feature that enables cleaning of the body without wetting the surrounds.

DermaPrep™ represents a new paradigm – for controlled, hygienic, mechanical cleaning and debridement of acute and chronic skin conditions.

When compared to all currently available alternatives, using DermaPrep™ clinically improves the debridement and cleaning of patients.

Furthermore, it is easier to handle and more cost-efficient.

Patent in Europe and USA
